

Worksheet — Locating Places on the Earth (Class 6 CBSE)

Total marks: **25** · Questions: **11**

Instructions: Attempt all 10 questions. Show working for the subjective questions. Total time: 30 minutes.

Q1. The 0° latitude line is called the: [1 mark]

- (A) Tropic of Cancer
- (B) equator
- (C) Prime Meridian
- (D) Arctic Circle

Q2. The Earth is a perfect sphere. [1 mark]

- (A) True
- (B) False

Q3. The Prime Meridian passes through ____, near London. [1 mark]

Q4. The Tropic of Cancer is at: [1 mark]

- (A) 0°
- (B) 23½° N
- (C) 23½° S
- (D) 66½° N

Q5. The hottest heat zone (between the two tropics) is the: [2 marks]

- (A) Frigid Zone
- (B) Temperate Zone
- (C) Torrid Zone
- (D) Polar Zone

Q6. List the five most important parallels and their latitude values. [3 marks]

Q7. Find the place at coordinates (28.6° N, 77.2° E). State the city, hemisphere, and heat zone. [3 marks]

Q8. The Earth turns 360° in 24 hours. How many degrees per hour? Per minute? [2 marks]

Q9. When it is 9 am at Greenwich (0°), what time is it at 75° E? [3 marks]

Q10. A new city has coordinates (35° N, 50° E). (i) Which hemispheres? (ii) Which heat zone? (iii) How many hours is it from India (75° E)? [5 marks]

Q11. Why does India use ONE standard time (IST = 82.5° E) although it spans many degrees of longitude? [3 marks]

Answer Key

Worksheet — Locating Places on the Earth (Class 6 CBSE)

Q1. The 0° latitude line is called the:

Answer: equator

Equator = 0° latitude.

MCQ · EASY · 6-CBSE-SOC-LPE-03

Q2. The Earth is a perfect sphere.

Answer: False

It's an oblate spheroid (slightly flattened sphere).

TRUE_FALSE · EASY · 6-CBSE-SOC-LPE-01

Q3. The Prime Meridian passes through _____, near London.

Answer: Greenwich

Greenwich, England.

FILL_BLANK · EASY · 6-CBSE-SOC-LPE-05

Q4. The Tropic of Cancer is at:

Answer: 23½° N

Standard value.

MCQ · EASY · 6-CBSE-SOC-LPE-03

Q5. The hottest heat zone (between the two tropics) is the:

Answer: Torrid Zone

Torrid = hot.

MCQ · EASY · 6-CBSE-SOC-LPE-04

Q6. List the five most important parallels and their latitude values.

Answer: Equator (0°), Tropic of Cancer (23½° N), Tropic of Capricorn (23½° S), Arctic Circle (66½° N), Antarctic Circle (66½° S). Plus the poles at 90° N and 90° S.

Recall.

SHORT_ANSWER · EASY · 6-CBSE-SOC-LPE-03

Q7. Find the place at coordinates (28.6° N, 77.2° E). State the city, hemisphere, and heat zone.

Answer: City: New Delhi. Hemispheres: Northern + Eastern. Heat zone: Torrid (since latitude < 23½° N — actually 28.6° N is just north of the Tropic of Cancer, so it lies in the southern part of the north Temperate zone). Either Torrid or Temperate accepted depending on the boundary read; New Delhi is just inside the Temperate zone.

Coordinate reading + zone classification.

SHORT_ANSWER · MEDIUM · 6-CBSE-SOC-LPE-06

Q8. The Earth turns 360° in 24 hours. How many degrees per hour? Per minute?

Answer: Per hour: $360 / 24 = 15^\circ$ per hour. Per minute: $15 / 60 = 0.25^\circ$ per minute (or 1° in 4 minutes).

Basis of time zones.

SHORT_ANSWER · MEDIUM · 6-CBSE-SOC-LPE-07

Q9. When it is 9 am at Greenwich (0°), what time is it at 75° E?

Answer: 75° east $\rightarrow 75/15 = 5$ hours ahead. 9 am + 5 h = 2 pm at 75° E.

Apply 15° per hour; east is ahead.

SHORT_ANSWER · MEDIUM · 6-CBSE-SOC-LPE-07

Q10. A new city has coordinates (35° N, 50° E). (i) Which hemispheres? (ii) Which heat zone? (iii) How many hours is it from India (75° E)?

Answer: (i) Northern + Eastern hemispheres. (ii) 35° N is between $23\frac{1}{2}^\circ$ N and $66\frac{1}{2}^\circ$ N, so it lies in the north Temperate zone. (iii) Difference in longitude with India = $75 - 50 = 25^\circ$. Time difference = $25 / 15 \approx 1$ h 40 min. India (east of this city) is ahead by ~ 1 h 40 min.

Multi-step coordinate analysis.

LONG_ANSWER · HARD · 6-CBSE-SOC-LPE-06

Q11. Why does India use ONE standard time (IST = 82.5° E) although it spans many degrees of longitude?

Answer: India's longitude extends from about 68° E to 97° E — about 29° wide, which would naturally give ~ 2 hours of time difference between east and west. Using one time avoids confusion in trains, schools, broadcasting and government work. The trade-off: in eastern India the sun appears to rise earlier than the clock suggests, and in western India later. Many large countries (USA, Russia) use multiple time zones; India has chosen simplicity.

Trade-off discussion.
