

Worksheet — Development (Class 10 CBSE Economics)

Total marks: **30** · Questions: **11**

Instructions: Attempt all 11 questions. Show your reasoning where required. Total time: 50 minutes.

Q1. Per capita income is calculated as: [1 mark]

- (A) total income $\times$ population
- (B) total income $\div$ population
- (C) tax $\div$ population
- (D) GDP $\times$ inflation

Q2. Which of these CANNOT be bought directly in the market? [1 mark]

- (A) a mobile phone
- (B) a clean public school + safe streets + clean water
- (C) a car
- (D) a bag of rice

Q3. Per capita income alone is enough to compare development of countries. [1 mark]

- (A) True
- (B) False

Q4. The Human Development Report is published by the _____. [1 mark]

Q5. Among Kerala, Haryana and Bihar, which has the LOWEST IMR? [1 mark]

- (A) Bihar
- (B) Haryana
- (C) Kerala
- (D) all are equal

Q6. Reckless cutting of forests can cause ALL of the following EXCEPT: [2 marks]

- (A) reduced rainfall
- (B) loss of biodiversity
- (C) increased soil erosion
- (D) more groundwater recharge

Q7. Why is per capita income preferred over total income for comparing countries? How does the World Bank classify countries by income? [3 marks]

Q8. List THREE limitations of using per capita income alone as a measure of development. [3 marks]

Q9. Why is Kerala — though it has a LOWER per capita income than Haryana — said to have BETTER overall development? Use specific indicators. [3 marks]

Q10. Discuss the importance of PUBLIC FACILITIES in development. Why are they essential for the poor? Give examples. [6 marks]

Q11. Why is sustainability a key concern in development? Discuss with at least three Indian / global examples. [8 marks]

Answer Key

Worksheet — Development (Class 10 CBSE Economics)

Q1. Per capita income is calculated as:

Answer: total income ÷ population

Average income.

MCQ · EASY · 10-CBSE-SOC-ECO-DEV-02

Q2. Which of these CANNOT be bought directly in the market?

Answer: a clean public school + safe streets + clean water

Public goods.

MCQ · EASY · 10-CBSE-SOC-ECO-DEV-03

Q3. Per capita income alone is enough to compare development of countries.

Answer: False

Hides inequality + ignores public goods.

TRUE_FALSE · EASY · 10-CBSE-SOC-ECO-DEV-03

Q4. The Human Development Report is published by the ____.

Answer: UNDP

United Nations Development Programme.

FILL_BLANK · EASY · 10-CBSE-SOC-ECO-DEV-06

Q5. Among Kerala, Haryana and Bihar, which has the LOWEST IMR?

Answer: Kerala

Kerala IMR ~7.

MCQ · EASY · 10-CBSE-SOC-ECO-DEV-05

Q6. Reckless cutting of forests can cause ALL of the following EXCEPT:

Answer: more groundwater recharge

Forests AID recharge; cutting them reduces it.

MCQ · MEDIUM · 10-CBSE-SOC-ECO-DEV-07

Q7. Why is per capita income preferred over total income for comparing countries? How does the World Bank classify countries by income?

Answer: Total income depends on population — comparing total incomes does not tell us how much each person earns on average. PER CAPITA INCOME (= total income ÷ population) gives the AVERAGE income per person and allows fair comparison across countries of different sizes. The World Bank classifies countries into HIGH-INCOME, LOW-INCOME and MIDDLE-INCOME, with thresholds revised over time. India is in the LOW-MIDDLE income group.

Per capita rationale + World Bank groups.

SHORT_ANSWER · MEDIUM · 10-CBSE-SOC-ECO-DEV-02

Q8. List THREE limitations of using per capita income alone as a measure of development.

Answer: (i) **AVERAGE INCOME HIDES INEQUALITY** — two countries with the same average can have very different distributions. (ii) Many things people care about — clean schools, safe streets, water, public hospitals — are **PUBLIC FACILITIES** that cannot be bought directly. (iii) **NON-MATERIAL** goals like health, education, freedom and security are not captured by income alone.

Three limitations.

SHORT_ANSWER · MEDIUM · 10-CBSE-SOC-ECO-DEV-03

Q9. Why is Kerala — though it has a LOWER per capita income than Haryana — said to have BETTER overall development? Use specific indicators.

Answer: Although Haryana has higher per capita income, Kerala does much better on **HUMAN-DEVELOPMENT** indicators: lower IMR (~7 vs ~30), higher literacy rate, higher net attendance in schools and higher life expectancy. This is because Kerala has invested more in **PUBLIC HEALTH** (primary health centres, immunisation) and **PUBLIC EDUCATION** (good public schools). Higher income alone does not guarantee a better life — how income is spent on collective goods matters at least as much.

PCI vs HDI in Indian states.

SHORT_ANSWER · MEDIUM · 10-CBSE-SOC-ECO-DEV-05

Q10. Discuss the importance of **PUBLIC FACILITIES** in development. Why are they essential for the poor? Give examples.

Answer: **PUBLIC FACILITIES** are services provided collectively by the government — schools, primary health centres, drinking water, electricity, public transport, sewage, parks. They are essential because (i) many things needed for a good life **CANNOT** be bought individually — clean air and water, public hospitals, parks; (ii) public facilities are **MOST IMPORTANT FOR THE POOR** — the rich can sometimes buy private alternatives, but the poor cannot, so good public facilities are their only path to good health and education; (iii) public facilities provide a **LEVEL PLAYING FIELD**; (iv) they raise the quality of life of those who 'don't need them' too — clean public hospitals and schools reduce disease and crime, benefiting everyone. Kerala — with lower PCI than Haryana — has better health and education outcomes **BECAUSE** of its strong public facilities.

Public goods, equity, Kerala example.

LONG_ANSWER · HARD · 10-CBSE-SOC-ECO-DEV-04

Q11. Why is sustainability a key concern in development? Discuss with at least three Indian / global examples.

Answer: SUSTAINABILITY is a concern because the resources we depend on are FINITE — but we are using them at a pace that leaves little for future generations. SUSTAINABLE DEVELOPMENT means meeting present needs without compromising the ability of future generations to meet their own needs. EXAMPLES: (i) GROUNDWATER — India is the world's largest groundwater extractor. In Punjab, Haryana, Rajasthan and parts of Tamil Nadu, water is being pumped much faster than rains can refill the aquifer; wells are drying up. (ii) CRUDE OIL — at current consumption rates the world's reserves last about 35–40 years; we need a transition to renewable energy. (iii) FORESTS — reckless cutting reduces rainfall, harms biodiversity, increases erosion and warms the climate. (iv) CLIMATE CHANGE — environmental damage crosses national borders; countries must cooperate on climate, oceans and ozone. Any development that ignores SUSTAINABILITY is borrowing from our children — a debt no nation can pay back.

Concept + groundwater + oil + forests + climate.

LONG_ANSWER · HARD · 10-CBSE-SOC-ECO-DEV-07
