

Methods of Separation in Everyday Life

Total marks: **50** · Questions: **8**

Instructions: Read each question carefully and answer to the best of your ability.

Q1. What is the method of separating lighter husk from heavier grains by wind or blowing air called? [5 marks]

- (A) Handpicking
- (B) Winnowing
- (C) Sieving
- (D) Threshing

Q2. Explain the principle behind the separation method of sieving. [5 marks]

Q3. The process of settling down of heavier insoluble components at the bottom of a liquid is called _____. [5 marks]

Q4. Which of the following methods is used to separate butter from curd? [5 marks]

- (A) Churning
- (B) Filtration
- (C) Decantation
- (D) Magnetic separation

Q5. Describe the process of magnetic separation and explain its application in everyday life. [10 marks]

Q6. Handpicking is used for separating solid materials on the basis of differences in size, colour, and shape from a mixture. (True/False) [5 marks]

(A) True

(B) False

Q7. What is the purpose of decantation in the separation of substances? [5 marks]

Q8. A mixture containing potatoes, salt, and sawdust has been given to you. Outline a stepwise procedure for separating each component from this mixture. [10 marks]

Answer Key

Methods of Separation in Everyday Life

Q1. What is the method of separating lighter husk from heavier grains by wind or blowing air called?

Answer: Winnowing

MCQ · EASY · 6-SCI-MOS-01

Q2. Explain the principle behind the separation method of sieving.

Answer: Sieving is based on the difference in size of the particles. It separates solids from a mixture based on variations in particle size using a sieve.

SHORT_ANSWER · MEDIUM · 6-SCI-MOS-02

Q3. The process of settling down of heavier insoluble components at the bottom of a liquid is called _____.

Answer: sedimentation

FILL_BLANK · EASY · 6-SCI-MOS-01

Q4. Which of the following methods is used to separate butter from curd?

Answer: Churning

MCQ · MEDIUM · 6-SCI-MOS-01

Q5. Describe the process of magnetic separation and explain its application in everyday life.

Answer: Magnetic separation is the process of separating magnetic and non-magnetic substances using a magnet. It is used to separate iron nails from sawdust, and also in industries to separate scrap iron from waste materials.

LONG_ANSWER · HARD · 6-SCI-MOS-02

Q6. Handpicking is used for separating solid materials on the basis of differences in size, colour, and shape from a mixture. (True/False)

Answer: True

TRUE_FALSE · EASY · 6-SCI-MOS-01

Q7. What is the purpose of decantation in the separation of substances?

Answer: Decantation is used to separate liquids from solids by gently pouring the liquid into another container, leaving the solid particles behind.

SHORT_ANSWER · MEDIUM · 6-SCI-MOS-03

Q8. A mixture containing potatoes, salt, and sawdust has been given to you. Outline a stepwise procedure for separating each component from this mixture.

Answer: First, separate the potatoes from the mixture by handpicking. Then, use a magnet to separate any iron particles from the sawdust. Next, use water to dissolve the salt and separate it from the sawdust. Finally, use filtration to separate the salt solution from the sawdust.

CASE_BASED · HARD · 6-SCI-MOS-04
