

Class 6 Science · Ch 1 Worksheet A · What is Science?

Total marks: 14 · Questions: 6

Instructions: Answer all questions. Write neatly in the space provided in your notebook.

Q1. Science is best described as [1 mark]

- (A) a way of understanding the world by observation and experiment
- (B) a list of facts to memorise
- (C) an old story passed from elders
- (D) a hobby unrelated to daily life

Q2. _____ is the urge to ask questions about the world around us. [1 mark]

Q3. You can be a scientist by carefully observing things in your daily life. [1 mark]

- (A) True
- (B) False

Q4. In one or two sentences, explain why curiosity is important in science. [2 marks]

Q5. Give one example of doing science in your daily life and explain why it counts as science. [3 marks]

Q6. Pick something you noticed today (e.g. why ice cubes float, why sound is louder near a wall). Write: (a) the observation, (b) a question, (c) a hypothesis, (d) one way to test it. [6 marks]

Answer Key

Class 6 Science · Ch 1 Worksheet A · What is Science?

Q1. Science is best described as

Answer: a way of understanding the world by observation and experiment

Science is a systematic way of learning by observation and testing.

MCQ · EASY · 6-SCI-WOS-01

Q2. _____ is the urge to ask questions about the world around us.

Answer: Curiosity

Curiosity drives all scientific inquiry.

FILL_BLANK · EASY · 6-SCI-WOS-01

Q3. You can be a scientist by carefully observing things in your daily life.

Answer: True

Anyone can practise scientific thinking; observing and questioning are the start.

TRUE_FALSE · EASY · 6-SCI-WOS-01

Q4. In one or two sentences, explain why curiosity is important in science.

Answer: Curiosity makes a scientist notice unusual things and ask 'why' or 'how'. Without curiosity there are no questions to investigate, and so no science.

Tests the link between curiosity and inquiry.

SHORT_ANSWER · MEDIUM · 6-SCI-WOS-01

Q5. Give one example of doing science in your daily life and explain why it counts as science.

Answer: Sample answer: Noticing that wet clothes dry faster on a windy day, asking why, and trying it on a still day to compare. It counts because it involves observing, asking a focused question, and testing.

Tests applying the idea of science to daily life.

SHORT_ANSWER · MEDIUM · 6-SCI-WOS-01

Q6. Pick something you noticed today (e.g. why ice cubes float, why sound is louder near a wall).

Write: (a) the observation, (b) a question, (c) a hypothesis, (d) one way to test it.

Answer: Sample: (a) Ice cubes float on water. (b) Why does ice float when most solids sink? (c) Hypothesis: Ice is less dense than water. (d) Test: weigh an empty measuring cup; fill with water at the brim; weigh again to find the mass of the water. Repeat with the same cup filled with crushed ice. Compare the masses.

Open-ended; full credit for any thoughtful application of the four steps.
