

Class 6 Science · Ch 2 Worksheet C · Biodiversity & Conservation

Total marks: 12 · Questions: 7

Instructions: Reflect on biodiversity and how to protect it.

Q1. Biodiversity refers to [1 mark]

- (A) one kind of plant
- (B) the variety of living things in a region
- (C) a kind of soil
- (D) a type of weather

Q2. Cutting a forest reduces biodiversity mainly because [1 mark]

- (A) the area gets smaller
- (B) it removes the homes of many plants and animals
- (C) the soil colour changes
- (D) plants don't matter to animals

Q3. Tiny living things visible only through a microscope are called _____. [1 mark]

Q4. Once a species becomes extinct, we can usually bring it back from another location. [1 mark]

- (A) True
- (B) False

Q5. Why is biodiversity important? [3 marks]

Q6. Suggest two simple actions students can take to protect biodiversity in their school surroundings. [2 marks]

Q7. Imagine all bees disappear from your area. Describe two effects on plants and one effect on humans. [3 marks]

Answer Key

Class 6 Science · Ch 2 Worksheet C · Biodiversity & Conservation

Q1. Biodiversity refers to

Answer: the variety of living things in a region

Biodiversity = the variety of plants, animals, and microbes in a region.

MCQ · EASY · 6-SCI-DLW-05

Q2. Cutting a forest reduces biodiversity mainly because

Answer: it removes the homes of many plants and animals

Habitat loss is the main driver of biodiversity loss.

MCQ · MEDIUM · 6-SCI-DLW-05

Q3. Tiny living things visible only through a microscope are called _____.

Answer: microorganisms

Microorganisms include bacteria, amoeba, and yeast.

FILL_BLANK · EASY · 6-SCI-DLW-01

Q4. Once a species becomes extinct, we can usually bring it back from another location.

Answer: False

Extinct means lost forever; recovery is rare and very hard.

TRUE_FALSE · MEDIUM · 6-SCI-DLW-05

Q5. Why is biodiversity important?

Answer: Biodiversity supports food (pollination by bees), medicines, soil fertility, pest control, and balance of nature. Losing it harms human well-being.

Tests understanding of value of biodiversity.

SHORT_ANSWER · MEDIUM · 6-SCI-DLW-05

Q6. Suggest two simple actions students can take to protect biodiversity in their school surroundings.

Answer: Plant native flowering plants to attract local insects and birds; avoid using chemical pesticides; do not litter or pour chemicals into drains; place a bird-bath; respect insects and small animals instead of killing them.

Tests practical application.

SHORT_ANSWER · MEDIUM · 6-SCI-DLW-05

Q7. Imagine all bees disappear from your area. Describe two effects on plants and one effect on humans.

Answer: On plants: many flowering plants would not be pollinated, producing fewer fruits and seeds; some species could decline or vanish. On humans: less food from crops that depend on bee pollination (mango, apple, pumpkin), raising prices and reducing variety in our diet. The example shows how interconnected biodiversity is.

Tests reasoning about ecological connections.

LONG_ANSWER · HARD · 6-SCI-DLW-05
