Answer Key

Class 6 Science · Ch 3 Worksheet B · Balanced Diet & Tests

Q1. Iodine solution turns blue-black on a food that contains

Answer: starch

The iodine test turns blue-black with starch.

MCQ · EASY · 6-SCI-MEH-01

Q2. Rubbing a food on plain paper and seeing an oily mark suggests the food has

Answer: fat

Fat leaves an oily mark on paper.

MCQ · EASY · 6-SCI-MEH-01

Q3. A diet that has all food groups in suitable amounts is called a _____ diet.

Answer: balanced

A balanced diet has every nutrient in the right amount.

FILL_BLANK · EASY · 6-SCI-MEH-02

Q4. Eating only sugary biscuits all day is a balanced diet.

Answer: False

Sugary biscuits give carbs and fat but no protein, vitamins, or fibre.

TRUE_FALSE · MEDIUM · 6-SCI-MEH-02

Q5. Adding lemon to a meal helps the body absorb iron.

Answer: True

Vitamin C in lemon enhances iron absorption.

TRUE_FALSE · MEDIUM · 6-SCI-MEH-03

Q6. Why is breakfast important for school children?

Answer: Breakfast supplies energy and concentration after the long overnight gap. Skipping it leaves children weak, distracted, and tempted to overeat later.

Health link to morning meal.

SHORT_ANSWER · MEDIUM · 6-SCI-MEH-02

Q7. You want to test whether a slice of bread contains starch. Explain how.

Answer: Place a small piece of bread on a plate. Add 1-2 drops of iodine solution. If it turns blue-black, it contains starch. (Bread does — wheat is high in starch.)

Tests the iodine procedure.

SHORT_ANSWER · MEDIUM · 6-SCI-MEH-01

Q8. Two children eat the same amount of rice. One also eats dal, vegetables, and milk. Compare the long-term effects on their health.

Answer: The child eating only rice gets energy but lacks proteins, vitamins, minerals, fibre — over time growth is slower, falling sick is easier, and tiredness is common. The second child gets all major nutrients, supporting growth, immunity, and energy. Variety matters more than quantity.

Tests evaluating dietary balance.

LONG_ANSWER · HARD · 6-SCI-MEH-03
